

NSTR Patrol

Data Hosting Options & Requirements

Patrol Data Only | Photo & File Storage Excluded

Prepared for: Client | Date: August 2026

1. Option 1 - If We Store Data in the Cloud

If the patrol data is stored in the cloud, this is what it will cost.

Item	Cost per Month
Cloud Data Hosting	\$120
Cloud Platform Charge	\$20
Total Cloud Cost	\$140 per month

In Indian Rupees:

- Per Month: ~ Rs 16,520
- Per Year: ~ Rs 1,98,240

This amount is for cloud hosting only. It covers keeping the system online and data available every day.

2. Option 2 - If You Want Your Own In-House Server

If you prefer to keep all data in your own office, you can use your own server instead of the cloud. For that, you will need to arrange a server with the capacity below.

One-time server purchase and electricity / maintenance will be separate.

What Specifications Does the In-House Server Need?

To handle the data we collect (details in Section 3), the in-house server should have:

Requirement	What is Needed
Storage Space	50 GB minimum, 100 GB recommended for 6 months
Memory (RAM)	8 GB minimum
Processor	4 Core
Support for Staff	100 staff at the same time
Data Safety	Daily automatic backup (included in 100 GB)
Internet	Stable connection for phones to sync

This setup will comfortably handle the daily data load and keep 6 months of records ready for reports and maps.

3. How Much Data Do We Collect?

This is how much patrol information is collected automatically when staff are on duty.

- Staff Count: 100 forest staff
- Duty Time: Average 8 hours per day
- Recording Speed: Phone saves location every 3 seconds

Period	Total Records Collected
Per Person / Per Day	~ 9,600 records
All 100 Staff / Per Month	~ 2,88,000 records
All 100 Staff / 6 Months	~ 17,28,000 records

Each record is very small - about 4KB.

How long do we keep it?

We keep 6 months of data. After 6 months, older data is automatically cleared and space is reused. So the 50-100 GB is on a 6-month rolling cycle.

Simple Growth Example:

- 50 staff -> about half the space and cost
- 200 staff -> about double the space and cost

Growth is direct and predictable.

4. Summary

Choice	What You Pay / Arrange
Cloud	~ Rs 16,520 per month - no need to buy server
In-House	Arrange server: 50-100 GB, 8 GB RAM, 4 Core - one-time purchase

Both options handle the same amount of data. The choice is yours - cloud is simpler to maintain, in-house keeps data fully in your premises.

Not Included Here

Storage for photos, videos, and other files captured during patrol - this will be calculated separately based on average photo size and number of photos per day.
